IN THE CLAIMS:

1.   (Currently Amended) A method for presenting text from multimedia data to a user[;], the method comprising:

receiving multimedia data containing an associated plurality of sets of text data, wherein the plurality of sets of text data includes a first text data set associated with a first plurality of video frames of the multimedia data, and a second text data set associated with a second plurality of video frames of the multimedia data;

extracting the associated plurality of sets of text data from the multimedia data; [and]

outputting the [associated]first text data set [without outputting moving images from the multimedia data] with a one video frame of the first plurality of video frames; and

responsive to determining that the text in the multimedia data has changed from the first text data set to the second text data set, outputting the second text data set and a one video frame of the second plurality of video frames.

2.   (Cancelled)

3.   (Currently Amended) The method as recited in claim 1, wherein [the output data comprises a plurality of sets of data and wherein several sets]more than one of the plurality of sets of text data are presented to the user simultaneously.

4.   (Currently Amended) The method as recited in claim 3, wherein the [several]more than one of the plurality of sets of text data are presented in separate frames.

5.   (Currently Amended) The method as recited in claim 1, wherein [the output data comprises a plurality of sets of data and wherein each]the first text data set [of data] and the second text data set are[is] presented to the user individually in a sequential order.

6.   (Currently Amended) The method as recited in claim 5, wherein [the]a next set of text data in the sequential order is presented in response to an indication by [a]the user to display the next set of text data.

7.   (Currently Amended) The method as recited in claim 1, wherein the step of extracting the plurality of sets of [associated] text data comprises parsing the multimedia data to determine the [associated]first text data set and the one video frame of the first plurality of video frames and discarding any moving image data.

8.   (Currently Amended) A computer program product in a computer readable media for use in a data processing system for presenting text from multimedia data to a user; the computer program product comprising:

first instructions for receiving multimedia data containing an associated plurality of sets of text data, wherein the plurality of sets of text data includes a first text data set associated with a first plurality of video frames of the multimedia data, and a second text data set associated with a second plurality of video frames of the multimedia data;

second instructions for extracting the associated plurality of sets of text data from the multimedia data; [and]

third instructions for outputting the [associated] first text data set[without outputting moving images from the multimedia data] with a one video frame of the first plurality of video frames; and

fourth instructions that, responsive to determining that the text in the multimedia data has changed from the first text data set to the second text data set, output the second text data set and a one video frame of the second plurality of video frames.

9.   (Cancelled)

10.   (Currently Amended) The computer program product as recited in claim 8, wherein [the output data comprises a]more than one of the plurality of sets of text data [and wherein several sets of the plurality of sets of data] are presented to the user simultaneously.

11.   (Currently Amended) The computer program product as recited in claim 10, wherein the [several]more than one of the plurality of sets of text data are presented in separate frames.

12.   (Currently Amended) The computer program product as recited in claim 8, wherein [the output data comprises a plurality of sets of data and wherein each]the first text data set [of data] and the second text data set are [is] presented to the user individually in a sequential order.

13.   (Currently Amended) The computer program product as recited in claim 12, wherein [the]a next set of text data in the sequential order is presented in response to an indication by [a]the user to display the next set of text data.

14.   (Currently Amended) The computer program product as recited in claim 8, wherein the second instructions comprise instructions for parsing the multimedia data to determine the [associated]first text data set and the one video frame of the first plurality of video frames and discarding any moving image data.

15.   (Currently Amended) A system for presenting text from multimedia data to a user; the system comprising:
        a receiver which receives multimedia data containing an associated plurality of sets of text data, wherein the plurality of sets of text data includes a first text data set associated with a first plurality of video frames of the multimedia data, and a second text data set associated with a second plurality of video frames of the multimedia data;
        a text extraction unit which extracts the associated plurality of sets of text data from the multimedia data; and
        an output unit which outputs the [associated]first text data set [without outputting moving images from the multimedia data] with a one video frame of the first plurality of video frames and, responsive to determining that the text in the multimedia data has

changed from the first text data set to the second text data set, outputs the second text data set and a one video frame of the second plurality of video frames.

16.   (Cancelled)

17.   (Currently Amended) The system as recited in claim 15, wherein [the output data comprises a plurality of sets of data and wherein several sets] more than one of the plurality of sets of text data are presented to the user simultaneously.

18.   (Currently Amended) The system as recited in claim 17, wherein the [several]more than one of the plurality of sets of text data are presented in separate frames.

19.   (Currently Amended) The system as recited in claim 15, wherein the [output data comprises a plurality of sets]first [of] text data set and the second text data set[wherein each set of data is]are presented to the user individually in a sequential order.

20.   (Currently Amended) The system as recited in claim 19, wherein [the]a next set of text data in the sequential order is presented in response to an indication by [a]the user to display the next set of text data.

21.   (Currently Amended) The system as recited in claim 15, wherein the extraction unit parses the multimedia data to determine the [associated]first text data set and the one video frame of the first plurality of video frames and [discarding]discards any moving image data.
